

Lab 7 - Intro to CSS

Instructions

1. Answer the below question in the boxes if needed.
2. For coding exercises, code on your computer and zip all your code before submission.
3. Please submit the assignment through TalentLabs Learning System.

Part 1: Inline CSS

Steps:

1. Go to VS Code and open the folder that we created in Lab 1
2. Create a new HTML file inside the folder name "inline-css.html". You can use the HTML skeleton we included in Chapter 1.
3. Build HTML elements inside the body to replicate the screenshot below

This is a heading

This is a paragraph.

4. Use inline CSS to style it as follows. The text color used is "maroon". For the background color, use the syntax background-color: linen;

This is a heading

This is a paragraph.

Part 2: External CSS

1. Copy the "inline-css.html" file into a new file "external-css.html".
2. In the "external-css.html", delete all the inline CSS and recreate the same CSS styling in Part 1 with external CSS. Name the external css file as "external.css". Remember that you need to include/import the CSS file in the HTML file. Otherwise, the styling would not take effect.
3. Add the CSS file in the same directory as the HTML file.

Part 3: Specificity

1. Change the heading into color "blue" and the paragraph into "green". Use inline CSS for the heading and internal CSS for the paragraph.
2. Zip the two HTML files and the CSS file into one zip file. Upload it to the Learning Management System.
