

## Lab 5 - Tables

### Instructions

1. Answer the below question in the boxes if needed.
2. For coding exercises, code on your computer and zip all your code before submission.
3. Please submit the assignment through TalentLabs Learning System.

### Part 1: Table Creation

Steps:

1. Go to VS Code and open the folder that we created in Lab 1
2. Create a new html file and name it as "table.html" inside the folder.
3. Replace the HTML with the following code. (We have included some table styling for you already)

```
<!DOCTYPE html>
<html>
<head>
  <title>Page Title</title>
  <style>
    table, th, td {
      border:1px solid black;
    }
  </style>
</head>
<body>

</body>
</html>
```

4. Build a table inside the body section so that it display a table like the one below.

Name	Age	Gender
Jill Smith	50	Female
Will Smith	40	Male

## Part 2: Column Width

1. The age column is too small. Set its width to 70 percent or more. Here is the sample output.

Name	Age	Gender
Jill Smith	50	Female
Will Smith	40	Male

2. Take a screenshot, name it as "part2".

## Part 3: Colspan

1. We do not want separate headers for Age and Gender. We simply want a single header of "Properties" that spans two columns beside Name. We also want its width set to 70 percent. See the sample output.

Name	Properties	
Jill Smith	50	Female
Will Smith	40	Male

2. Zip your final html file **with the screenshot from part 2**. Upload the zip file and submit it to the Learning Management System.
