AGENDA

- Displaying Images in HTML
 - Image Tag Variations
-

Displaying Images in HTML

Images

An image is denoted by the `` tag

```

```

<code></code>	This is the tag used to define images
<code>src="url"</code>	This defines the path/location of the image. This can be a url or a path to the image
<code>alt="Alternate Text"</code> 	The alt attribute provides alternate text for the image. This is in the case that the image cannot be viewed

Images

Image in the same folder as HTML

If the image is located in the same folder as the HTML file, we have to just input the image name in “src” in order to display the image

Parrot.jpg

How to display this?

Images

Image in the same folder as HTML

If the image is located in the same folder as the HTML file, we have to just input the image name in “src” in order to display the image

Parrot.jpg

```

```

Images

Explanation

This PC > Desktop > M1-HTML-CSS			
Name	Date modified	Type	Size
 index	27-Sep-21 6:04 PM	Chrome HTML Do...	1 KB
 parrot	22-Apr-21 10:15 PM	JPG File	10,582 KB

(Image in the same directory as html)

Images

Image in different folder relative to HTML

If the image is located in a folder “New Folder” that is in the same directory as the HTML file, what do we write in the src?

Parrot.jpg
(This image is inside
New Folder)

How to display this?

Images

Explanation

This PC > Desktop > M1-HTML-CSS >

Name	Date modified	Type	Size
New folder	01-Oct-21 6:10 PM	File folder	
index	27-Sep-21 6:04 PM	Chrome HTML Do...	1 KB

After entering New Folder

This PC > Desktop > M1-HTML-CSS > New folder

Name	Date	Type	Size	Tags
parrot	22-Apr-21 10:15 PM	JPG File	10,582 KB	

Images

Image in different folder relative to HTML

If the image is located in a folder “New Folder” that is in the same directory as the HTML file, what do we write in the src?

Parrot.jpg
(This image is inside
New Folder)

```

```

Image Tags Variations

Images

Image Dimensions

If we type the following HTML, the image would be displayed as width 500px and height 500px

```

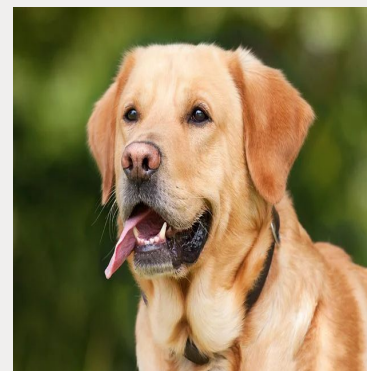

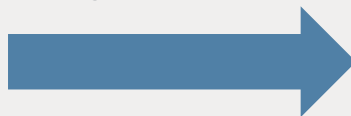

```

Be Careful about Ratio

H:500px, W:600px

If you are putting in a
wrong aspect ratio

H:500px, W:500px

Disclaimer: This technically falls under styling and CSS. Here is just a quick introduction only.

</talentlabs>

Images

Image as Links

We have learnt about `<a>` tags before which serves as links. Similarly, we can also make an image into a clickable link by wrapping it with `<a>` tags.

```
<a href="www.google.com">  
      
</a>
```

If this image is clicked, we will be redirected to google.com!

That's all for this module!

THANK YOU!
